Assign the code for the primary malignancy until treatment is completed. When the primary malignancy has been excised but further treatment (e.g., radiation therapy, chemotherapy, additional surgery, adjuvant therapy) is directed to that site, code as active cancer.

When a primary malignancy has been excised or eradicated and there is no further treatment of the malignancy to the site, and no evidence of any existing primary malignancy, a code from category Z85 is used to indicate the former site (history) of the malignancy.
